

Appl. No. 09/912711
Amdt. dated October 4, 2004
Reply to Office action of April 2, 2004

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-27 (Canceled).

28. (Currently amended) A disk storage media, comprising an information storage portion for storing information and an electronic circuit portion for processing the information,

the information storage portion storing a plurality of information to be used in an external system having a system control portion, said plurality of information including a plurality of emulators of system operating programs.

the electronic circuit portion including discrimination means for discriminating an operation condition of the external system, selecting means for selecting information one of said plurality of emulators matched with the operation condition among those stored in the information storage portion and notifying means for notifying an identifier showing a storage portion of the selected information one of said plurality of emulators stored in the information storage portion so as to allow the use of the external system.

29. (Currently amended) A disk storage media comprising an information storage portion for storing information and an electronic circuit portion for processing the information,

the information storage portion storing a plurality of information to be used in an external system having a system control portion, said plurality of information including a plurality of emulators of system operating programs.

the electronic circuit portion including selecting means for discriminating an operation condition of the external system based on the information supplied from the external system and selecting information one of said plurality of emulators matched with the operation condition among those stored in the information storage portion and notifying means for notifying an

identifier showing a storage portion of the selected ~~information~~ one of said plurality of emulators stored in the information storage portion so as to allow the use of the external system.

30. (Cancelled)

31. (Cancelled)

32. (Previously presented) A storage media according to claim 28, wherein the information stored in the information storage portion includes system parameters necessary to drive the external system, and the electronic circuit portion includes a setting portion for setting the selected system parameters to the external system.

33. (Currently amended) A storage media according to claim 28, wherein the external system is a computer system having a printer and the information stored in the information storage portion is includes a parameter for adjusting a printer condition.

34. (Previously presented) A storage media according to claim 28, wherein the disk storage media is an optical disk.

35. (Currently amended) A computer system comprising a disk storage media having an information storage portion for storing information including a plurality of emulators of system operating programs, an electronic circuit portion for processing ~~an~~ said information and a computer capable of connecting the storage media,

the electronic circuit portion including discriminating means for discriminating an operation condition of the external system, selecting means for selecting ~~information~~ one of said plurality of emulators matched with the operation condition among those stored in the information storage portion and notifying means for notifying an identifier showing a storage portion of the selected ~~information~~ one of said plurality of emulators stored in the information storage portion so as to allow the use of the external system for starting up the system program of the computer.

36. (Previously presented) A computer system including a disk storage media having an information storage portion for storing information, an electronic circuit portion for processing information and a computer capable of connecting the storage media,

Appl. No. 09/912711
Amdt. dated October 4, 2004
Reply to Office action of April 2, 2004

the computer system further including a printer,

the information storage portion storing printing condition,

the electronic circuit portion including discriminating means for discriminating a print condition of the printer, selecting means for selecting a printing condition matched with the discriminated condition among those stored in the information storage portion and notifying means for notifying an identifier showing a storage portion of the selected printing condition stored in the information storage portion,

the computer reading the printing condition for adjusting a printing environment from the information storage media for executing a printing suitable for the printing environment.

37. (Previously presented) A computer system according to claim 35, wherein the storage media is an optical disk.

38. (Previously presented) A storage media according to claim 29, wherein the information stored in the information storage portion includes system parameters necessary to drive the external system, and the electronic circuit portion includes a setting portion for setting the selected system parameters to the external system.

39. (Previously presented) A storage media according to claim 29, wherein the external system is a computer system having a printer and the information stored in the information storage portion is a parameter for adjusting a print condition.

40. (Previously presented) A storage media according to claim 36, wherein the disk storage media is an optical disk.
